

## CST-361 Tools Install Guide

**Note:** Students need to have a reliable high-speed Internet connection for installation, and at least 8GB RAM to run this software.

**Directions:** This class will leverage the EclipseEE IDE and the Wildfly enterprise application server running with Oracle JDK 8. These tools will each be installed per the instructions in this Tools Install Guide. We will also be using GIT as a source code repository. Use the following steps to install each of the tools.

### Oracle JDK 8 (Appendix A)

Download and install the Oracle JDK per the instructions in Appendix A.

**\*\*You must uninstall ALL non JDK 8 and DO NOT use a version other than Wildfly 13.0\*\***

### EclipseEE IDE

Download and install the EclipseEE IDE:

- Download and install the EclipseEE IDE for your platform:
  - Select EclipseEE IDE link provided in Course Materials.
  - Click on the Eclipse icon under the Desktop IDEs section.
  - Click on the Other Packages button.
  - Download the Eclipse IDE for Enterprise Java Developers for your operating system.
  - Unzip or open the DMG downloaded file and copy the contents to a desired location where you install your tools.

### Install Wildfly Server (Appendix B)

Start the EclipseEE IDE and create a default workspace as prompted.

- Click on the Servers tab and the click the new server link.
- Filter on JBoss in the server type. Select the JBoss AS, Wildfly & EAP Server Tools, click the Next button, select Accept Terms, and click the Finish button. You will be prompted to restart the EclipseEE IDE and you need to follow this step.
- Click again on the Servers tab and the click the new server link.
- Filter on Wildfly in the server type. Select the Wildfly 13 option, click the Next button, click the Next button, click the Download and Install Runtime link, follow the Wizard install instructions and make sure to browse and set the desired location for your tools for the JBoss Wildfly server, set the Home Directory where the JBoss Wildfly server was installed, and make sure the JavaSE01.8 Execution Environment is selected. Wait until the download and installation of the Wildfly server is complete. Once complete there should be a Wildfly server listed in your Servers tab.

- NOTE: if for some reason the Download and Install Runtime link does not work then you can manually download the Wildfly 13.0.0.Final server from the Wildfly link provided in Course Materials and in the EclipseEE New Server dialog simply set the Home Directory where the JBoss Wildfly server was installed.

### Validate Environment and Tools (Appendix C)

- Start the EclipseEE IDE and create a default workspace as prompted.
- Select File->New->Dynamic Web Project menu options, name your project 'helloworld' (without the quotes), select the Wildfly 13.0 Runtime, Dynamic Web Module version of 4.0, and click the Next button twice, check the 'Generate web.xml deployment descriptor' option, and click the Finish button.
- Highlight the 'helloworld' project and right click on the project, select the New->Servlet menu options, in the Create Servlet dialog enter a Class name of 'HelloWorld' (without the quotes), and click the Finish button.
- Right click on the project and click on the Run on Server option, chose the Wildfly server, click the Finish button.
- Start the Wildfly server by selecting Wildfly server from your Servers tab, and click the the run icon.
- Use the internal EclipseEE browser or an external browser to access the application by going to the following URL and validate the following response was displayed back in the browser:  
<http://localhost:8080/helloworld/HelloWorld>

**NOTE:** In order to get auto-deployment to work properly, the EclipseEE IDE requires you to update the Wildfly configuration file. This can be done as follows:

- Go the Servers tab within your Project Workspace.
- Expand the Wildfly Server display the Filesets tree.
- Expand the Configuration File tree, right click on the standalone.xml file, and select the Edit File menu option. Select the Source tab in the editor.
- Locate the 'jboss:domain:deployment-scanner subsystem.
- Add the option auto-deploy-zipped="false" as an XML attribute to the deployment-scanner setting.
- Add the option auto-deploy-exploded="true" as an XML attribute to the deployment scanner setting. NOTE: be careful cutting and pasting text from a Word document into code or XML. You should paste into a plain text editor and validate no strange characters are being pasted into the code or XML. See screenshot below.
- Save changes and close the configuration file.

- Restart the Wildfly server.
- To validate this is working properly, start the Wildfly server. Make a change and save the change to one of the Java files in the project. You should see that the war file was redeployed by monitoring the Console tab.

**NOTE:** To install xhtml files, see Appendix B Below.

### **Install GIT Client**

The SourceTree GIT Client will be used for this class. Access to, and additional information for resources, may be found on the Course Materials Support page in the Student Success Center.

Be sure to download or update to the version specified by your instructor.

## Appendix A

1. Go to <https://www.oracle.com/technetwork/java/javase/downloads/jdk8-downloads-2133151.html> to download the JDK.
2. Select the appropriate install.

The screenshot shows the Oracle JDK 8 Downloads page. On the left, a sidebar lists various Java products. The main content area has tabs for Overview, Downloads, Documentation, Community, Technologies, and Training. The Downloads tab is active, showing the 'Java SE Development Kit 8 Downloads' section. A yellow box highlights the 'Important Oracle JDK License Update' section. Below this, there's a section for 'JDK 8u231 checksum'. At the bottom, a table lists various JDK 8u231 download links for different operating systems and architectures. Two red callout boxes with arrows point to the 'Accept License Agreement' radio button and the 'Windows x64' download link in the table.

**Accept License Agreement**

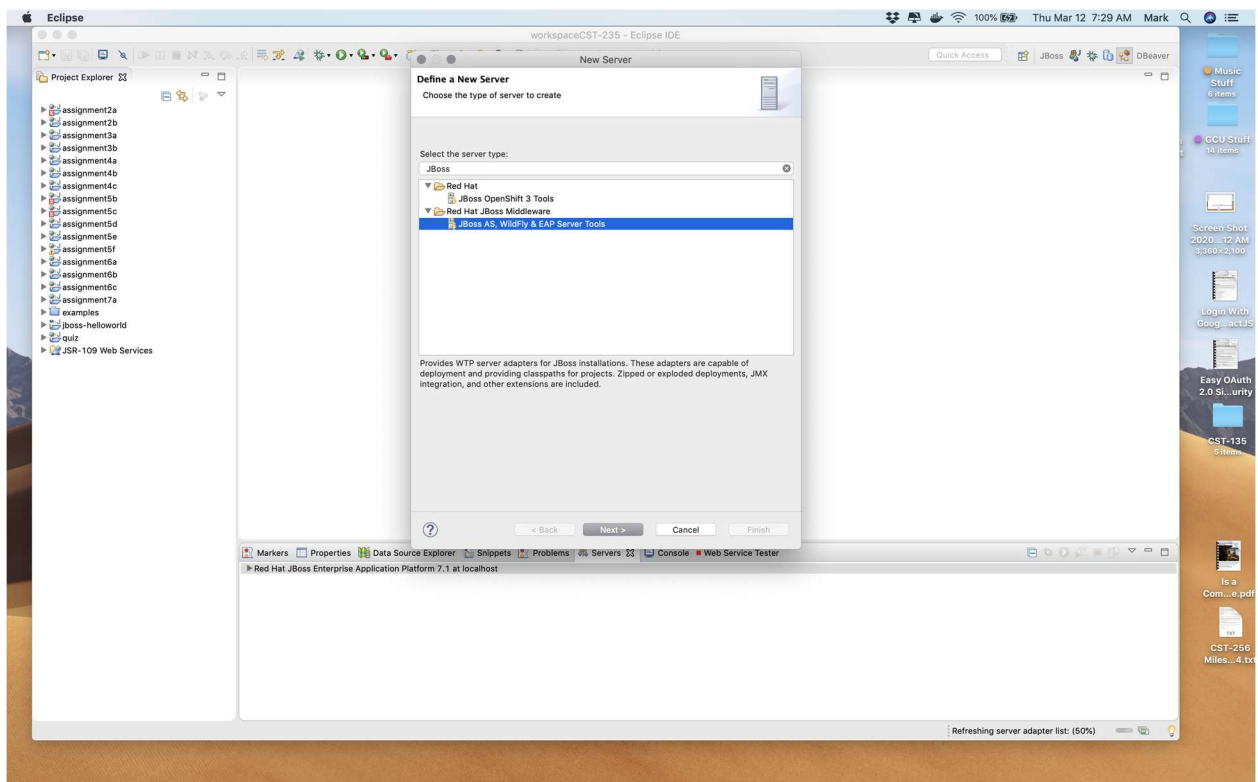

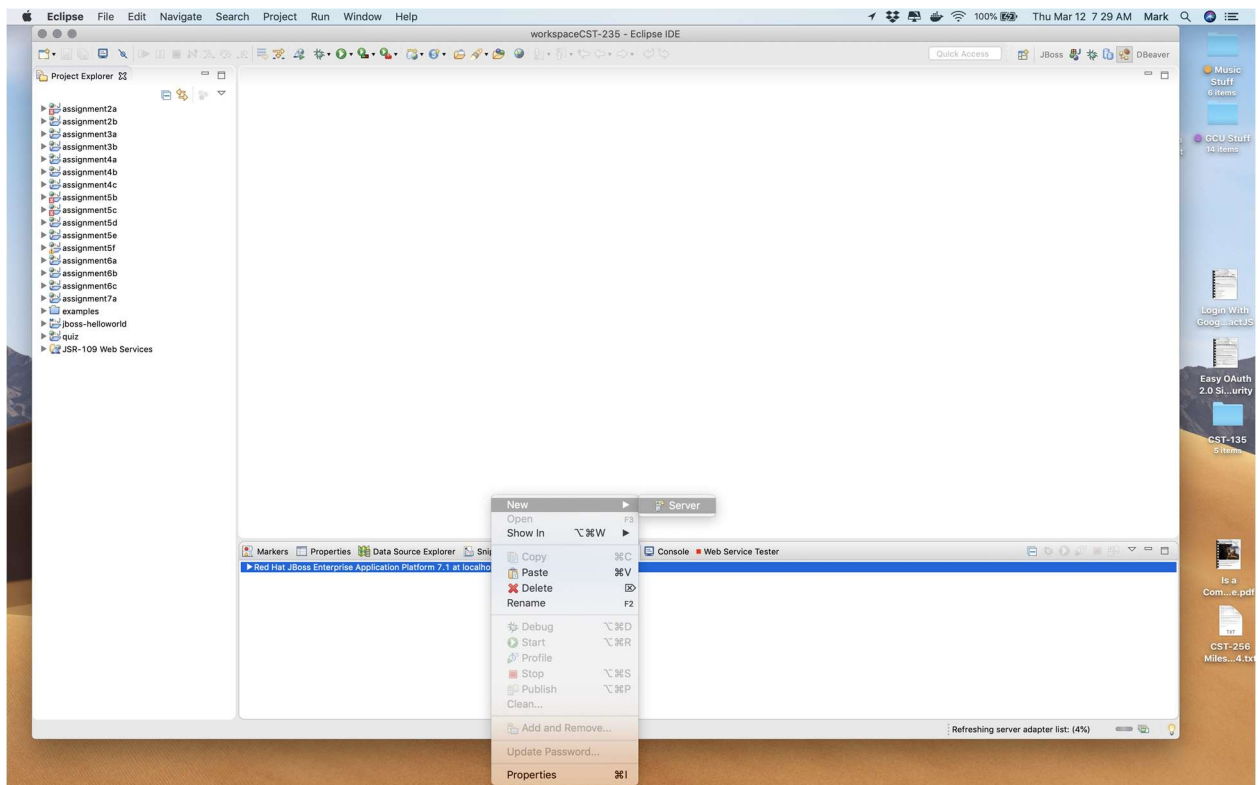

**Download the correct 64 Bit version**

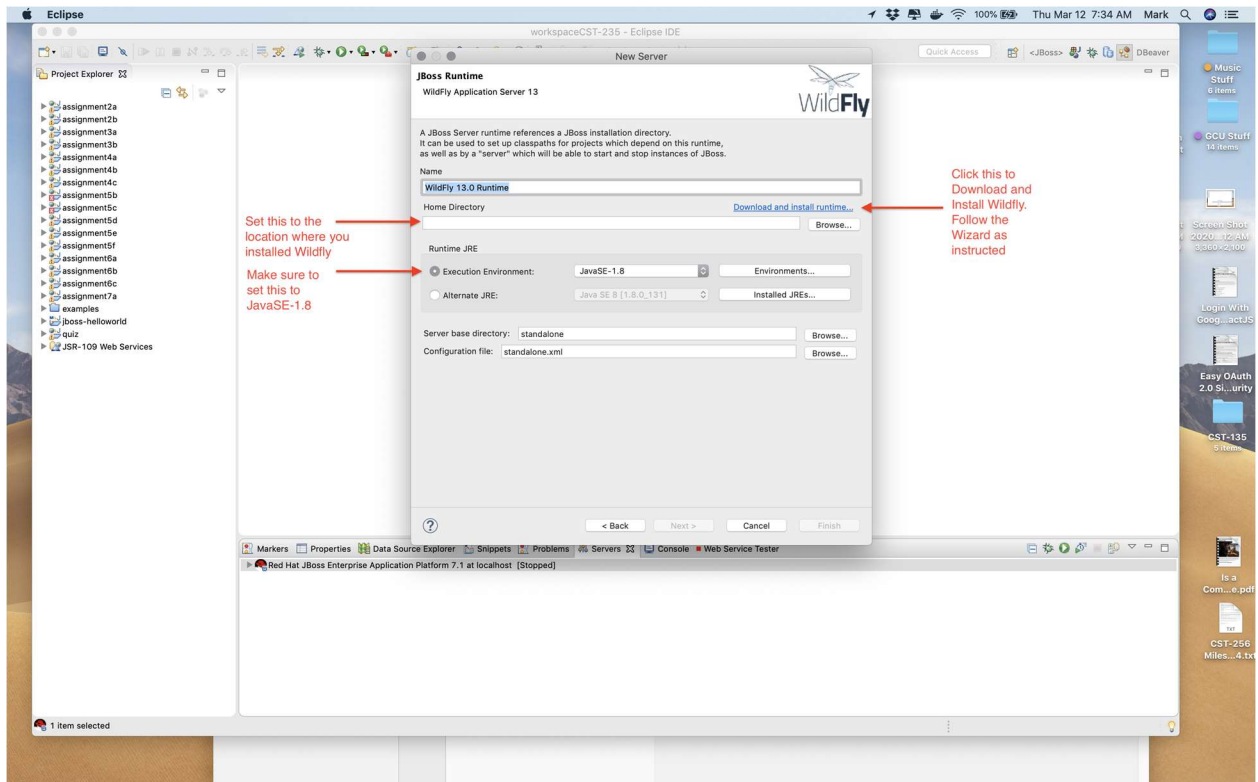

Product File Description	File Size	Download
Linux ARM 32 Hard Float ABI	72.9 MB	<a href="#">jdk-8u231-linux-arm32-vfp-hflt.tar.gz</a>
Linux ARM 64 Hard Float ABI	69.8 MB	<a href="#">jdk-8u231-linux-arm64-vfp-hflt.tar.gz</a>
Linux x86	170.93 MB	<a href="#">jdk-8u231-linux-i586.rpm</a>
Linux x86	185.75 MB	<a href="#">jdk-8u231-linux-i586.tar.gz</a>
Linux x64	170.32 MB	<a href="#">jdk-8u231-linux-x64.rpm</a>
Linux x64	185.16 MB	<a href="#">jdk-8u231-linux-x64.tar.gz</a>
Mac OS X x64	253.4 MB	<a href="#">jdk-8u231-macosx-x64.dmg</a>
Solaris SPARC 64-bit (SVR4 package)	132.98 MB	<a href="#">jdk-8u231-solaris-sparcv9.tar.Z</a>
Solaris SPARC 64-bit	94.16 MB	<a href="#">jdk-8u231-solaris-sparcv9.tar.gz</a>
Solaris x64 (SVR4 package)	133.73 MB	<a href="#">jdk-8u231-solaris-x64.tar.Z</a>
Solaris x64	91.96 MB	<a href="#">jdk-8u231-solaris-x64.tar.gz</a>
Windows x86	200.22 MB	<a href="#">jdk-8u231-windows-i586.exe</a>
Windows x64	210.18 MB	<a href="#">jdk-8u231-windows-x64.exe</a>

3. Register with Oracle and download.

The screenshot shows the Oracle account sign-in page. It has a white background with a dark blue header. The main content area is a white box with the title 'Oracle account sign in'. Below the title are two input fields: 'Username' and 'Password'. Each field has a small 'i' icon to its right. Below the input fields is a green 'Sign in' button. Below the button is a link that says 'Need help?'. At the bottom of the white box is a section titled 'Don't have an Oracle Account?' with a 'Create Account' button. At the very bottom of the page, there is a small footer with the text '© Oracle | Terms of Use | Privacy Policy'.

## APPENDIX B

```
<subsystem xmlns="urn:jboss:domain:deployment-scanner:2.0">
  <deployment-scanner path="deployments" relative-to="jboss.server.base.dir" scan-interval="5000" auto-deploy-zipped="false" auto-deploy-exploded="true" runtime-fa
</subsystem>
```

# Appendix C
